PROFESSIONAL SUMMARY

Dynamic **Systems Engineer** with over 4 years of experience in managing enterprise IT infrastructure, virtualization, and network security. Specialized in **Linux Administration**, Windows Administration, **Containerization (Docker)**, and **Cloud Operations (AWS)**. Proven track record of optimizing system performance, implementing automated deployment solutions, and maintaining high-availability environments. Expert in bridging the gap between hardware infrastructure and modern cloud-native technologies.

WORK EXPERIENCE

International Springs And Stampings Private Limited | Thane

July 2025 – Present

IT Executive

- Managed and monitored IT infrastructure including servers, firewalls, routers, switches, Wi-Fi, and network systems to ensure high availability and minimum downtime.
- Administered Linux and Windows environments, performing system upgrades, patch management, firmware updates, and backup operations.
- Provided end-user technical support for hardware, software, email, network, printers, scanners, biometrics, CCTV, and other IT systems.
- Managed LAN/WAN connectivity, IP addressing, endpoint security, antivirus solutions, and organizational security policies.
- Maintained IT asset inventory and conducted regular audits for laptops, desktops, networking devices, and software resources.
- Monitored CCTV, NVR/DVR systems, biometric devices, and surveillance infrastructure while coordinating with vendors for issue resolution.
- Handled Microsoft Outlook and email administration including mailbox configuration, spam control, and permission management.
- Performed scheduled server and application backups, disaster recovery operations, and data restoration during failures or corruption incidents.
- Prepared IT documentation, incident reports, asset reports, network configurations, and monthly performance summaries for management.
- Identified opportunities for automation, infrastructure optimization, and security improvements to enhance operational efficiency.
- Conducted cybersecurity awareness and phishing prevention training sessions for employees to promote secure IT practices and reduce security risks.
- Implemented and managed open-source IT monitoring and infrastructure management solutions to improve system visibility, performance monitoring, and incident tracking.
- Deployed and maintained asset inventory management systems for centralized tracking of organizational IT assets and lifecycle management.
- Assisted in strengthening organizational cybersecurity posture by implementing security best practices, access control measures, and proactive risk identification.

Cyber Security Intern

- Developed multiple cybersecurity-focused Python projects covering encryption, password security, image protection, and system monitoring concepts.
- Built a CLI-based Caesar Cipher application for secure text encryption and decryption with customizable shift key functionality.
- Designed a Password Complexity Checker using Regex validation to evaluate password strength based on length, symbols, digits, and character patterns.
- Created an image encryption and decryption tool using RGB pixel manipulation with NumPy and Pillow libraries for secure visual data handling.
- Developed an ethical keylogger for cybersecurity awareness and educational purposes using Python keyboard event handling.
- Gained practical exposure to classical cryptography, secure coding practices, input validation, and system-level event monitoring.
- Worked in Linux-based environments while improving scripting, debugging, and problem-solving skills.
- Utilized tools and technologies including Python, Regex, NumPy, Pillow, and Linux for project development and testing.

MKCL (Maharashtra Knowledge Corporation Limited) | Seawoods, Navi Mumbai

July 2022 - July 2025

System Administrator

- Spearheaded the management and development of IT infrastructure, ensuring scalability and efficiency.
- Implemented comprehensive asset management protocols, resulting in streamlined tracking and optimization of resources.
- Proficiently administered Linux environments, enhancing system performance and security.
- Provided hands-on hardware and software technical support, resolving issues promptly and ensuring uninterrupted operations.
- Familiarized with various client and server operating systems, ensuring compatibility and seamless integration.
- Conducted proactive network monitoring activities, promptly identifying and addressing issues to prevent potential downtime and security breaches, ensuring uninterrupted network availability and performance.
- Configured and managed Active Directory services effectively, streamlining user management and access control.
- Experienced in conducting vulnerability assessments and penetration testing using Qualys software. Tasks include identifying security vulnerabilities, generating detailed reports.
- Skilled in managing DNS configurations on AWS, including setting up and troubleshooting A, CNAME, TXT, and MX records. Proficient in using Route 53 for domain registration and ensuring high availability.
- Utilized Docker to containerize applications, enabling consistent environments, simplified deployments, and efficient resource utilization across development and production systems.

TECHNICAL SKILLS

Network Administration | Cybersecurity | Ethical Hacking | Linux Administration | Database Management
Hardware operations | Firewall | Cloud Technology | Virtualization | Windows Server Administration | Active Directory | DNS Management on AWS | Vulnerability Assessment Penetration Testing | Docker | Containerization

Academic Profile

Collage -

MKCL Finishing School (MFS) a Work based learning degree program | Seawoods July 2022-July-2025
Bachelor of Science, CSA (Computer System Administration)
Degree certificate from -YCMOU (Yashwantrao Chavan Maharashtra Open University), Nashik

HSC –

Science from Jaihind College | Chalisgaon, Jalgaon 57.83%
2022

SSC –

Rashtriya Vidyalaya | Chalisgaon, Jalgaon 74.60%
2020

COURSE & CERTIFICATIONS

- **[Cyber Security Course]** [SkillFactory]-[2026]
- **[Ethical Hacker]**, [Cisco]-[2025]
- **[Foundation Of Cyber Security]**, [Google] - [2024]
- **[Operating Systems Basics]**, [Cisco] – [2024]
- **[Cisco Networking Basic]**, [Cisco] – [2024]
- **[Career Essentials in System Administration]**, [Microsoft and LinkedIn] - [2024]
- **[Networking Devices and Initial Configuration]**, [Cisco] – [2024]
- **[SonicWall Firewall]**, [Udemy] – [2024]
- **[Career Essentials in Cybersecurity]**, [Microsoft and LinkedIn] - [2024]
- **[Linux Tutorial]**, [Great Learning] - [2024]
- **[AWS for Beginners]**, [Great Learning] - [2024]
- **[Ethical Hacking - Mobile Platforms and Network Architecture]**, [Great Learning] - [2024]

PROJECTS

- **Self-Hosted Cloud OS**
 - Deployed CASA OS using Docker Compose to create a self-hosted environment for personal cloud storage and application management.
 - Utilized my skills in Docker, CASA OS, and Linux to containerize and configure the system for efficient resource usage and easy scalability.
 - The deployment provided seamless integration with various applications, enhancing accessibility and control over my personal data while ensuring high system reliability
- **Web-Based File Browser**
 - Deployed a web-based file browser using Docker Compose to provide secure, centralized file access and management across the network
 - The deployment streamlined file access and sharing by offering a user-friendly web interface, improving collaboration and ensuring secure access to personal data.
- **Passbolt Open-Source Password Manager**
 - Deployed Passbolt as an open-source password manager using Docker Compose to securely store and share passwords within a containerized environment.

- Leveraged my skills in Docker, MySQL, and container orchestration to configure and manage the system for efficient deployment, security, and scalability.
- The deployment enabled secure password management, providing seamless integration with team collaboration features, ensuring easy access and robust security for sensitive data.
- **Centralized Asset Management Tool**
 - Deployed an open-source asset management tool to streamline asset tracking and management processes.
 - Utilized my expertise in Linux and web server (Nginx, Apache), I successfully deployed the project, demonstrating effective implementation and optimization of resources.
 - asset management software streamlines inventory tracking, reducing instances of loss and increasing operational efficiency. By centralizing data and automating processes, it enhances decision-making capabilities and improves resource allocation, ultimately optimizing organizational productivity
- **Web Based Operating System Installer**
 - Deployed linux based open-source OS installer to automate the OS deployment process, reducing manual effort and deployment time.
 - Implemented a solution that significantly simplifies the installation of operating systems, enabling simultaneous deployment across multiple machines, thereby enhancing efficiency and scalability in system administration tasks
- **Deployed Network Monitoring Tool**
 - Implemented an open-source network monitoring tool, enhancing network visibility and efficiency, resulting in proactive issue detection and mitigation, ultimately optimizing network performance and minimizing downtime.
 - Implemented network monitoring to proactively identify and resolve issues, ensuring optimal network performance and minimizing downtime. This initiative enhanced cybersecurity by detecting and mitigating threats promptly, resulting in improved overall reliability and stability of the network infrastructure.
